

In 2017 Wickhambrook Parish Council purchased a vehicle activated sign (VAS), which is used to collect data on vehicle speeds from seven locations in the parish – these signs don't collect identifying information on the vehicles, simply the speeds at which they are travelling as they go past the sign. The data is collated and shared with Suffolk Constabulary to help them prioritise resources to decide when and where to carry out enforcement activity. We thought it would be helpful now to share this data with you going forwards, and would be very grateful if you could take a look at these speeding figures and help us by chatting with your friends and family and encouraging them to think about their speed when driving through Wickhambrook.
